## Corporate Fact Sheet

### **About MicroGREEN Polymers**

Founded in 2002, MicroGREEN Polymers was created to transform the plastics industry by developing and licensing economically and ecologically viable advanced plastics technologies to promote sustainable living across many industries and countries. MicroGREEN Polymers works diligently to commercialize its patented Ad-air™ technology, which significantly reduces the financial and ecological costs of many thermoplastic products while enhancing performance.

MicroGREEN is a privately-held company incorporated in Washington State, with an office in Arlington, Washington as well as an R&D scale-up facility in Green Bay, Wisconsin. MicroGREEN has been funded by angel investors, industry insiders, and Seattle-based institutional investor, WRF Capital. Two investment rounds have been completed, the latest being a Series A Preferred Stock issuance of \$2.4 million.

### **Ad-air™ Technology**

Our patented Ad-air™ technology expands a range of solid-state thermoplastics by engineering a core structure of billions of microscopic bubbles (microcells) with an integral skin surface while maintaining or improving the required material properties for an application.

### **Target Markets**

Applications of Ad-air™ technology include plastics parts and products for food packaging and beverages, general protective packaging, transportation industries, consumer electronics, appliances, and building materials. In entirety, these applications represent an addressable market of \$25 billion, which equals \$1.6 billion in royalty potential.

### **Management**

Thomas G. Malone, President and CEO  
Krishna V. Nadella, Ph.D., Co-founder and CTO  
R. Michael Crill, Atlas Accelerator, CFO  
Barbara Burke, MME, Operations Director  
Mike Waggoner, MS, Technology & Sales Leader  
Xiaoxi Wang, Ph.D., Senior Scientist
